

Terms of Reference for a Project Manager for the CUIDA Chagas Project

The *Fundação Oswaldo Cruz* (Fiocruz), through the *Instituto Nacional de Infectologia Evandro Chagas* (INI), is looking for a Project Manager for the CUIDA Chagas Project.

About Chagas disease

Chagas disease (CD) is a potentially life-threatening neglected tropical disease that is caused by the protozoan parasite *Trypanosoma cruzi* (*T. cruzi*). *T. cruzi* parasites are mainly transmitted through contact with feces/urine of infected blood-sucking triatomine ('kissing') bugs. Other forms of transmission include consumption of contaminated food; transmission from an infected mother to her newborn during pregnancy or childbirth; blood or blood product transfusion from infected donors; organ transplants using organs from infected donors; and laboratory accidents. CD has two phases, acute and chronic, and an estimated 30-40 % of infected people will develop severe and sometimes life-threatening medical problems over the course of their lives, including cardiac alterations, digestive manifestations, and neurological or mixed alterations, which may require specific treatment. If untreated, infection is lifelong.

CD is mainly found in endemic areas of 21 continental Latin American countries, with approximately 65 million people at risk of contracting the disease. An estimated 6 to 7 million people worldwide are infected with the *T. cruzi* parasite, of which the large majority resides in Latin America. Every year, over 10,000 CD-related deaths are reported. Despite the high morbidity and mortality of CD and the significant associated economic burden, only 7% of people with CD have been diagnosed and only about 1% receive etiological treatment. An estimated 1.12 million women of childbearing age are infected with the *T. cruzi* parasite, and the congenital transmission rate approaches 5% with an estimated 8,000 to 15,000 infected babies being born each year. As maternal and child health services do not routinely screen mothers or newborns for CD in most endemic areas, prevalence in pregnant women and newborns may be underestimated. Congenital infection could perpetuate CD indefinitely, even in countries without vector transmission, which is why the CUIDA Chagas project was brought into existence.

About the project

The CUIDA Chagas project (Comunidades Unidas para Inovação, Desenvolvimento e Atenção para a doença de Chagas) is an international initiative that aims to contribute to the elimination of congenital transmission of Chagas disease by scaling up and enhancing access to diagnosis, treatment and comprehensive care, through innovative and sustainable approaches in Bolivia, Brazil, Colombia and Paraguay. The project is implemented through a consortium of key players in the public health landscape, and includes Brazil's *Fundação para o Desenvolvimento Científico e Tecnológico em Saúde* (Fiotec) and Fiocruz, Bolivia's *Instituto Nacional de Laboratorios de Salud "Néstor Morales Villazón"* (INLASA), Colombia's *Instituto Nacional de Salud* (INS), Paraguay's *Servicio Nacional de Erradicación del Paludismo* (SENEPA), and the international non-governmental organization *Foundation for Innovative New Diagnostics* (FIND).

Through a combination of implementation and innovation research, the project will be implemented in over 35 municipalities in Bolivia, Brazil, Colombia and Paraguay. In addition to a number of initiatives related to equitable market access, civil society engagement and advocacy, the project includes the following studies:

- I. Implementation research;
- II. The validation of a rapid diagnostic test based diagnostic algorithm;
- III. Two treatment related clinical trials:
 - IIIa. A double-blind, phase III clinical trial to evaluate a shorter benznidazole treatment regimen (BENLATINO).
 - IIIb. A prospective study on the efficacy and safety of Benznidazole, with a randomized, double-blind, nested phase II study of benznidazole compared to nifurtimox (BENBRASIL).

Primary health care (PHC) will be the central focus of interventions, integrating the project's interventions with existing initiatives most relevant to each country context.

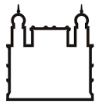

The position

The CUIDA Chagas project is looking for a full-time Project Manager, preferably based in Rio de Janeiro, Brazil, who will be tasked with the day-to-day (financial) management of the project. Your responsibilities will include, but not be limited to:

- Supporting the implementation of project activities, ensuring that targets and timelines are met, work is documented and regular reports are prepared and submitted;
- Closely liaising with the Fiotec team and the consortium partners on all issues related to the project's budget, financial monitoring, and financial reporting;
- Monitoring overall progress and use of resources, initiating corrective actions when necessary;
- Conducting an annual review of the overall project budget, in line with the donor's requirements;
- Reviewing and assessing all partner's financial reports and assist Fiotec in the development of the quarterly detailed financial report;
- Liaising with the logistics, admin and finance staff in the other project countries;
- Managing project risks, including the development of mitigation plans;
- Managing project administration.
- Monitoring the purchase of supplies and equipment, both domestic and international, in the four countries;
- Monitoring project execution and submit resource requests to project donors;
- Supporting the drafting and signing process of contracts with partner institutions for the various activities carried out by the project;
- Supporting the organization of national and international events;
- Facilitating regular meetings with partners.

Your profile

- You have a master's degree in a relevant discipline;
- You have at least 10 years of demonstrated experience in a similar position;
- You have a good knowledge of project cycle management and are able to meet deadlines;
- You have excellent communication skills;
- You are a Brazilian national, or have the required documents to be able to work in Brazil;
- You are fluent in English and Portuguese, and have a working knowledge of Spanish;
- You have a hands-on attitude and do not shy away from challenges;
- Cultural sensitivity comes as a second nature to you;
- You don't mind traveling occasionally for work purposes.

Ministério da Saúde

FIOCRUZ

Fundação Oswaldo Cruz

What we offer

- The opportunity to work within a highly motivated, international team, on a project that has the potential to make a significant impact on the lives of people that are affected by Chagas disease;
- A position of 40 hours/week;
- A monthly remuneration of up to R\$ 11,000 (net – scholarship [bolsa]);
- The opportunity for occasional travel, both national and international;
- The use of a project laptop.

How to Apply

Please send your curriculum vitae, together with a motivation letter to info@cuidachagas.org

Please include the following phrase in the subject of your email: 'CUIDA Chagas – Application for the position of Project Manager'. The deadline for receiving applications is March 24th 2024.
